MEDIA RELEASE – FOR IMMEDIATE USE

Orontide Makes Strategic Move into Hydrocarbons

A Henderson based engineering services company has expanded its integrated service offering with a move into the Hydrocarbons arena. The recent acquisition of Hydrocarbon Solutions is the next step in a strategic growth plan for the Orontide Group that has seen the privately owned business building and diversifying their operations for over 40 years.

Hydrocarbon Solutions, a division of Orontide Group Limited, brings a range of new capabilities and specialist expertise in the design, construction and maintenance of hydrocarbon, dangerous goods and water infrastructure.

Through this acquisition, Orontide have gained a team of specialists with deep technical expertise to ensure Hydrocarbon, DGR and Water facilities are designed, constructed and maintained to the highest standard. Led by founder and Manager Sam Sellers, the Hydrocarbons team have played pivotal roles in some of the most complex projects developed throughout Western Australia in recent years. These projects have bridged a variety of industry sectors including mining, rail, defence and civil infrastructure.

Orontide CEO Stewart Maddison believes that the acquisition of Hydrocarbon Solutions was a logical decision for Orontide. “We believe there are a lot of opportunities in the hydrocarbon market and are excited at the work prospects we have already secured as a result of this collaboration,” Mr Maddison said.

Originally targeting hydrocarbon projects for rail, aviation, utilities and local government, the new division is also pursuing growth opportunities across a range of sectors including the Mining, Oil and Gas, and Defence sectors where Orontide has a strong presence.

“We are seeing an increase in operational and sustaining capital project opportunities as a result of commodity prices and the Government’s commitment to infrastructure and defence spending” Mr Maddison said. “And we are confident that our extensive experience working in these sectors, combined with our new technical expertise in hydrocarbons will position us well to take advantage of these.”

Other services available from the new acquisition include the design and construction of bulk fuel and lube facilities, supply of fuel management systems and filtration systems with provision for electrical and mechanical engineering requirements as well as pumping equipment. The addition of water infrastructure capabilities such as pumping and metering solutions, stand pipe design and construction, oil water systems and wash down facilities for light and heavy vehicles will extend the Group's focus from the Mining and Resources, Defence and oil and Gas sectors to rail, utilities, airports and a host of other industries. A suite of electrical capabilities, engineering and consultancy services rounds out the new offerings available.

Since 1979 Orontide have grown and diversified to become one of Australia's most successful engineered maintenance and asset preservation companies. Today, Orontide is a leading company providing an integrated range of services and employing hundreds of people across their extensive operational and client sites. The acquisition of Hydrocarbon Solutions Pty Ltd by Orontide in October 2020 brings new capabilities and opportunities for both organisations with broader coverage of key Industry sectors.

"This is a truly customer focused synergy strengthened by operations in strategic locations throughout Western Australia," Sam Sellers, Manager - Hydrocarbon Solutions stated.

"Orontide has already proven we have vision, strength and capability and are confident we are well positioned to continue to build on our success well into the future," said Mr Maddison.
